01_MOM — Team Meeting 1, ITS Case Study

Oct 21, 2026

Meeting details

Project	ITS case study: Power and Power Quality Measurements on the GM Campus
Supervisors	Prof. Dr. Michael Freiburg, Prof. Dr. Felix Hackelöer
Date	21 October 2026
Attendees	Gaurav, Krishnapriya, Hanna
erence	Session 1 plan: vision, ideas and blueprint

Agenda

1. Innovation ideas and how we would build them
2. Additions to the plan
3. Project timeline
4. Questions for facility management

Decisions

#	Topic	Outcome	Status
1	Innovation ideas	The six ideas and how we would build them The basis of the project:- 1. data health check 2. weekly power-quality report 3. event detective 4. campus context and waste finder 5. smart alerts 6. peak warning.	Proposed and Agreed
2	Additions to the plan	Further ideas on :- 1. data acquisition 2. dashboards 3. storage, smart features 4. security are added to the plan.	Proposed and Agreed
3	NILM	Not part of the project. The complexity is too high, and the installed energy meter is not a Siemens PAC4200, so earlier NILM work does not carry over. The meter's specification must be checked first.	Proposed and Pending (Under descision)
4	Timeline	Six phases: Discover (October), Plan (late October to early November), End to end (November), Grow (December), Add the brain (January), Finish (late January to February).	Proposed and Agreed
5	Way of working	Minutes are kept for every team meeting, and we keep one shared list of questions for facility management.	Proposed and Agreed

Further planning

The team planned these further ideas. Each one fits into a part of the plan we already have.

Area	Planned idea
Data acquisition	A configuration file or input mask for adding meters
Dashboards	Multiple Dashboards format
Data export and storage	Backups are very important
Smart features	Push notifications for broken components, major limit violations (Grenzwertverletzungen) and a predicted new peak
Smart features	Weekly e-mail digest for predictive maintenance
Security and user management	Treat security and user management as its own topic

Questions for facility management

1. Is our data needed anywhere else (for eample :- Audit or Planning which is currently in use ?
2. Which energy meter model is installed? Can we get its datasheet and communication manual?
3. Where is each meter installed?
4. Are we getting the network access to the meters?
5. What kind of data is been provided to us (for example :- Real or already existing data)

Next meeting: 02/10/2026 (Monday)
